

ISA² Core Vocabularies

The Core Vocabularies have been developed under the ISA² Programme of the European Commission, namely the action "Improving semantic interoperability". ISA² is a EUR 131 million programme supporting the modernisation of public administrations in Europe through the development of eGovernment solutions. More than 20 solutions are already available, with more to come soon. All solutions are open source and available free of charge to any interested public administration in Europe.
